Doctor review pack

Status: nothing has been reviewed or approved. No `reviewed` flag was changed. This pack is the material for one sitting with a doctor (about 45 minutes). The software is a simulation and never diagnoses; the doctor is asked only whether the wording and the checklist are safe to show.

What to bring back

For each item: **Approve**, **Change to ...**, or **Remove**, plus any comment. Then a developer applies the changes and flips `reviewed` one condition at a time (steps in `docs/CLINICAL_REVIEW.md`). Record name, registration number and date.

1. The three general lines (shown in every emergency)

- `instructions.general1`: "Call 112 / 108 now."
- `instructions.general2`: "If you can, unlock the door and tell someone nearby."
- `instructions.general3`: "Stay where you are. Your hospital has been alerted."

Question: is "Your hospital has been alerted" the right claim? (The app says "notification sent" elsewhere; nothing is real in this prototype.)

2. Condition-specific lines

HEART, STROKE, DIABETIC and ASTHMA each have **no lines yet** (`reviewed: false`). Please write the few simple actions a bystander may take for each, or say none should be shown. No drugs, doses or treatment.

3. The alert checklist (rules)

28 rules, all "pending doctor review", in `doctor-review.csv` (one row per rule: id, type, severity, conditions in plain words, the rule's own sentence, empty columns Approve / Change to / Remove / Comment). The app never shows the rule sentence to the patient; it says only "This combination is on our alert checklist."

Severity	Count
EMERGENCY	10
URGENT	12
WATCH	6

Ask: is any rule too eager (false alarms) or too slow (missed alert)? Are the severities right? Is anything missing for these four conditions?

4. "Why this alert" wording (neutral by design)

The patient and the hospital see what was reported and which checklist rules matched, never a score or a diagnosis. Current English text:

- `why.title`: Why this alert
- `why.loading`: Loading...
- `why.unavailable`: Reasons are not available right now
- `why.told`: What you told us
- `why.noneReported`: You did not report any symptoms.
- `why.noneCheckIn`: You did not report symptoms. This alert started from the safety check-in.
- `why.readings`: What your readings showed
- `why.noReadings`: No readings were shared. Live vitals sharing is off, or no reading was available.
- `why.readingsAt`: Reading taken at {{time}}
- `why.checklist`: Which checklist matched
- `why.neutral`: This combination is on our alert checklist.
- `why.noMatch`: Nothing matched our checklist. This does not say anything about your health.
- `why.draft`: This checklist is a draft waiting for a doctor to review. It does not say what is wrong with you. If you feel unwell, call 112 / 108.

Ask: does any sentence sound like a diagnosis, a promise or a reassurance? The words diagnosis, risk, normal, abnormal must not appear.

5. Symptom wording

Checklist (patient side) is in `docs/TRANSLATION_REVIEW.md` (keys `symptom.*`). The hospital desk sees these readable labels (`mock-server/adapters.js`):

Symptom ID	Label the hospital desk sees
`CHEST_PAIN`	Chest pain
`ARM_JAW_PAIN`	Pain spreading to arm or jaw
`FACE_DROOP`	Face drooping
`SUDDEN_CONFUSION`	Sudden confusion
`DIA_CONFUSION`	Confusion
`LOW_GLUCOSE_READING`	Low glucose reading
`WHEEZING`	Wheezing

Ask: are the labels accurate, clear and not misleading? Is "Pain spreading to arm or jaw" fair for what the patient ticks?

6. "Usual range" wording on Home

Keys `twin.*`: a comparison with the person's own usual values, never a verdict. Ask: does "Changed from your usual" worry people more than it should, or too little?

7. Responder passport page

Says "Prepared by the patient. Not verified by a doctor." Ask: is that enough for a stranger reading it in an emergency?

Sign-off

Item	Reviewer name	Registration no.	Date	Result
General lines				
HEART lines				
STROKE lines				
DIABETIC lines				
ASTHMA lines				
Rules table				
Why this alert wording				
Symptom wording				
Usual-range wording				
Passport page				

Appendix: rules table (same as doctor-review.csv)

rule_id	type	severity	conditions (plain words)	rule's own sentence (hidden in the app)	Approve	Change to	Remove	Comment
HEART_CHEST_PAIN	HEART	EMERGENCY	all of: chest_pain	Chest pain is a red-flag symptom				
HEART_ARM_PAIN_WITH_SWEATING_OR_BREATHLESSNESS	HEART	EMERGENCY	all of: left_arm_pain; any of: sweating, breathlessness	Left-arm pain together with sweating or breathlessness				
HEART_BREATHLESSNESS_WITH_SWEATING	HEART	EMERGENCY	all of: breathlessness, sweating	Breathlessness together with sweating				
HEART_LEFT_ARM_PAIN	HEART	URGENT	all of: left_arm_pain	Left-arm pain reported				
HEART_SWEATING	HEART	WATCH	all of: sweating	Unexplained sweating reported				
HEART_RATE_VERY_HIGH	HEART	URGENT	vitals {"heart_rate": {"gt": 120}}	Heart rate is well above the usual range				
HEART_RATE_VERY_LOW	HEART	URGENT	vitals {"heart_rate": {"lt": 45}}	Heart rate is well below the usual range				
HEART_RATE_RAISED	HEART	WATCH	vitals {"heart_rate": {"gt": 100, "lte": 120}}	Heart rate is somewhat raised				
HEART_BP_VERY_HIGH	HEART	URGENT	vitals {"bp_sys": {"gte": 180}}	Systolic blood pressure is very high				
HEART_BP_VERY_LOW	HEART	URGENT	vitals {"bp_sys": {"lt": 90}}	Systolic blood pressure is very low				
HEART_BP_RAISED	HEART	WATCH	vitals {"bp_sys": {"gte": 160, "lt": 180}}	Systolic blood pressure is raised				
STROKE_FACE_DROOPING	STROKE	EMERGENCY	all of: face_drooping	Face drooping is a stroke warning sign				
STROKE_ARM_WEAKNESS	STROKE	EMERGENCY	all of: arm_weakness	Arm weakness is a stroke warning sign				
STROKE_SLURRED_SPEECH	STROKE	EMERGENCY	all of: slurred_speech	Slurred speech is a stroke warning sign				
DIABETIC_LOW_GLUCOSE_READING_WITH_CONFUSION_OR_SWEATING	DIABETIC	EMERGENCY	any of: confusion, sweating; vitals {"glucose": {"lt": 70}}	Low glucose reading with confusion or sweating				
DIABETIC_LOW_GLUCOSE_REPORTED_WITH_CONFUSION_OR_SWEATING	DIABETIC	EMERGENCY	all of: low_glucose; any of: confusion, sweating	Low glucose reported with confusion or sweating				
DIABETIC_LOW_GLUCOSE_READING	DIABETIC	URGENT	vitals {"glucose": {"lt": 70}}	Low glucose reading				
DIABETIC_LOW_GLUCOSE_REPORTED	DIABETIC	URGENT	all of: low_glucose	Low glucose reported by the patient				
DIABETIC_CONFUSION	DIABETIC	URGENT	all of: confusion	Confusion reported; a glucose check is advised				

DIABETIC_GLUCOSE_HIGH	DIABETIC	WATCH	vitals {"glucose": {"gt": 250}}	Glucose reading is high				
ASTHMA_WHEEZE_WITH_LOW_SPO2	ASTHMA	EMERGENCY	all of: wheeze; vitals {"spo2": {"lt": 92}}	Wheeze together with low oxygen saturation				
ASTHMA_WHEEZE_WITH_BREATHLESSNESS	ASTHMA	EMERGENCY	all of: wheeze, breathlessness	Wheeze together with breathlessness				
ASTHMA_WHEEZE	ASTHMA	URGENT	all of: wheeze	Wheeze reported				
ASTHMA_BREATHLESSNESS	ASTHMA	URGENT	all of: breathlessness	Breathlessness reported				
HEART_BREATHLESSNESS	HEART	URGENT	all of: breathlessness	Breathlessness reported				
ASTHMA_SPO2_LOW	ASTHMA	URGENT	vitals {"spo2": {"lt": 92}}	Oxygen saturation is low				
ASTHMA_SPO2_BORDERLINE	ASTHMA	WATCH	vitals {"spo2": {"gte": 92, "lt": 95}}	Oxygen saturation is slightly low				
ASTHMA_BREATHING_FAST	ASTHMA	WATCH	vitals {"resp_rate": {"gt": 24}}	Breathing rate is raised
